SUBJECT INDEX

Acquisition in anthropometry, applications of digital image, 66
Acquisition and processing for three-dimensional display of internal structures, overview of data, 84
Acquisition, real-time three-dimensional vision for parts, 56
Ambiguities, and artifacts in man and machine, perceptual capabilities, 78
Anatomy atlas of the human brain, computerized, 116
Anthropometry, applications of digital image acquisition in, 66
Application of moire patterns for obtaining surface contour information on patients receiving radiotherapy, 2
Applications of digital image acquisition in anthropometry, 66
Applications in prosthodontics, topographic mapping of oral structures—problems and, 70
Applications in robot visual sensing, coherent optical methods for, 25
Applications, three-dimensional reconstruction from serial sections for medical, 98
Artifacts in man and machine, perceptual capabilities ambiguities, and, 78
Atlas of the human brain, computerized anatomy, 116

Beam profiler—past, present, and future, the light, 61
Brain, computerized anatomy atlas of the human, 116

Camera, the numerical stereo, 15
Capabilities, ambiguities, and artifacts in man and machine, perceptual, 78
Coherent optical methods for applications in robot visual sensing, 25
Computed tomographic volume images to visualize internal organs, three-dimensional display of, 106
Computer geometric modeling for machine perception of three-dimensional solids, 7
Computerized anatomy atlas of the human brain, 116
Contour information on patients receiving radiotherapy, application of moire patterns for obtaining surface, 2

Data acquisition and processing for three-dimensional display of internal structures, overview of, 84
Device for examining internal structure, three-dimensional viewing, 111
Digital image acquisition in anthropometry, applications of, 66
Discrete surfaces, display of three-dimensional, 90
Display of computed tomographic volume images to visualize internal organs, three-dimensional, 106
Display of internal structures, overview of data acquisition and processing for three-dimensional, 84
Display of three-dimensional discrete surfaces, 90

Examining internal structure, three-dimensional viewing device for, 111
Eye: isomorphic representation for machine vision, toward the robot, 30

Geometric modeling for machine perception of three-dimensional solids, computer, 7

Human brain, computerized anatomy atlas of the, 116

Image acquisition in anthropometry, applications of digital, 66
Images to visualize internal organs, three-dimensional display of computed tomographic volume, 106
Impact on reindustrialization, panel discussion: ultimate limits of three-dimensional machine perception and its, 123
Internal organs, three-dimensional display of computed tomographic volume images to visualize, 106
Internal structure, three-dimensional viewing device for examining, 111
Internal structures, overview of data acquisition and processing for three-dimensional display of, 84
Isomorphic representation for machine vision, toward the robot eye:, 30

Light beam profiler—past, present, and future, the, 61
Limits of three-dimensional machine perception and its impact on reindustrialization, panel discussion: ultimate, 123

Machine perception and its impact on reindustrialization, panel discussion: ultimate limits of three-dimensional, 123
Machine perception of three-dimensional solids, computer geometric modeling for, 7
Machine, perceptual capabilities, ambiguities, and artifacts in man and, 78
Machine vision, toward the robot eye: isomorphic representation for, 30
Man and machine, perceptual capabilities, ambiguities, and artifacts in, 78
Mapping of oral structures—problems and applications in prosthodontics, topographic, 70
Medical applications, three-dimensional reconstruction from serial sections for, 98
Methods for applications in robot visual sensing, coherent optical, 25
Modeling for machine perception of three-dimensional solids, computer geometric, 7
Moire patterns for obtaining surface contour information on patients receiving radiotherapy, application of, 2

Noncontact visual three-dimensional ranging devices, 48
Numerical stereo camera, the, 15

Optical methods for applications in robot visual sensing, coherent, 25
Oral structures—problems and applications in prosthodontics, topographic mapping of, 70
Organs, three-dimensional display of computed tomographic volume images to visualize internal, 106
Overview of data acquisition and processing for three-dimensional display of internal structures, 84

Parts acquisition, real-time three-dimensional vision for, 56
Patients receiving radiotherapy, application of moire patterns for obtaining surface contour information on, 2
Perception and its impact on reindustrialization, panel discussion: ultimate limits of three-dimensional machine, 123
Perception of three-dimensional solids, computer geometric modeling for machine, 7
Perceptual capabilities, ambiguities, and artifacts in man and machine, 78
Problems and applications in prosthodontics, topographic mapping of oral structures—, 70
Processing for three-dimensional display of internal structures, overview of data acquisition and, 84
Profiler—past, present, and future, the light beam, 61
Prosthodontics, topographic mapping of oral structures—problems and applications in, 70

Radiotherapy, application of moire patterns for obtaining surface contour information on patients receiving, 2
Ranging devices, noncontact visual three-dimensional, 48
Real-time three-dimensional vision for parts acquisition, 56
Reconstruction from serial sections for medical applications, three-dimensional, 98
Reindustrialization, panel discussion: ultimate limits of three-dimensional machine perception and its impact on, 123
Representation for machine vision, toward the robot eye: isomorphic, 30
Robot eye: isomorphic representation for machine vision, toward the, 30
Robot visual sensing, coherent optical methods for applications in, 25

Sections for medical applications, three-dimensional reconstructions from serial, 98
Sensing, coherent optical methods for applications in robot visual, 25
Serial sections for medical applications, three-dimensional reconstruction from, 98
Solids, computer geometric modeling for machine perception of three-dimensional, 7
Stereo camera, the numerical, 15
Structure, three-dimensional viewing device for examining internal, 111
Structures, overview of data acquisition and processing for three-dimensional display of internal, 84
Structures—problems and applications in prosthodontics, topographic mapping of oral, 70
Surface contour information on patients receiving radiotherapy, application of moire patterns for obtaining, 2
Surfaces, display of three-dimensional discrete, 90

Three-dimensional discrete surfaces, display of, 90
Three-dimensional display of computed tomographic volume images to visualize internal organs, 106
Three-dimensional display of internal structures, overview of data acquisition and processing for, 84
Three-dimensional machine perception and its impact on reindustrialization, panel discussion: ultimate limits of, 123
Three-dimensional reconstruction from serial sections for medical applications, 98
Three-dimensional solids, computer geometric modeling for machine perception of, 7
Three-dimensional viewing device for examining internal structure, 111
Three-dimensional vision for parts acquisition, real-time, 56
Tomographic volume images to visualize internal organs, three-dimensional display of computed, 106
Topographic mapping of oral structures—problems and applications in prosthodontics, 70
Toward the robot eye: isomorphic representation for machine vision, 30

Ultimate limits of three-dimensional machine perception and its impact on reindustrialization, panel discussion:, 123

Viewing device for examining internal structure, three-dimensional, 111
Vision for parts acquisition, real-time three-dimensional, 56
Vision, toward the robot eye: isomorphic representation for machine, 30
Visual sensing, coherent optical methods for applications in robot, 25
Visual three-dimensional ranging devices, noncontact, 48
Volume images to visualize internal organs, three-dimensional display of computed tomographic, 106
